

- 15) The contract is **4Sp** and your partner's lead , the dummy and your hand are shown.
 i) Do you win the lead ? ii) If you do win the lead what do you lead back ?
 {{ it's not particularly relevant but declarer plays the 2 Hrts at trick one }}

	(dummy)	
	AQ74	
(partner)	J109	(you)
7 Hrts ----->	865	943
	Q54	A865
		K32
		K32

- 15) The contract is **3NT** and your partner's lead , the dummy and your hand are shown.
 i) Do you win the lead ? ii) If you do win the lead what do you lead back ?

	(dummy)	
	AQ74	
(partner)	KQJ	(you)
10 Hrts ----->	865	J943
	J54	A32
		Q32
		Q32

- 16) You are once again on lead against a slam. This time 6Sp. You vaguely remember that the leads you can make against 6Sp are the same as those made against 4Sp except that there is one additional lead you can make against 6Sp..
 On the hand below decide which three leads you *might* make against 6Sp.

K3
 987
 K432
 QJ83

- 17) Look at that hand again in Q) 16. Suppose this time you are on lead against 6NT . You have a vague recollection that the leads against 6NT are often different to those made against 3NT. Which two leads *might* you make against 6NT.

- 18) In 6Sp you receive the lead of the K Hrts. You win this presumably.
 What do play at trick 2? What is your plan ? {Hint - there is no 100% solution to this problem but there is a way of making 6Sp about 50% of the time }.

(declarer)	(dummy)
KQJ102	9876
A4	876
54	AQJ
AKQJ	432
